树之 习题选讲

浙江大学 陈 越

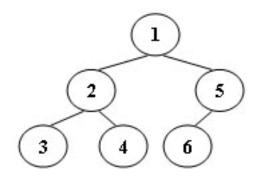

Tree Traversals Again

题意理解

- ■非递归中序遍历
 - □ Push的顺序为先序遍历
 - □ Pop的顺序给出中序遍历

Sample Input:

6

Push 1

Push 2

Push 3

Pop

Pop

Push 4

Pop

Pop

Push 5

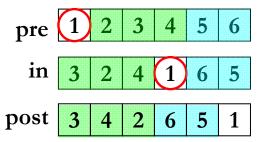

Push 6

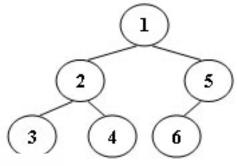

Pop

Pop

核心算法

```
pre 1 2 3 4 5 6

in 3 2 4 1 6 5

post

pre 1 2 3 4 5 6

in 3 2 4 1 6 5

post

1
```

1. 先确定根节点

void solve(int preL, int inL, int postL, int n)
{ if (n==0) return;
 if (n==1) {post[postL] = pre[preL]; return;}
 root = pre[preL];
 post[postL+n-1] = root;
 for (i=0; i<n; i++)
 if (in[inL+i] == root) break;
 L = i; R = n-L-1;
 solve(preL+1, inL, postL, L);
 solve(preL+L+1, inL+L+1, postL+L, R);
}</pre>
